Application/Control Number: 10/785,080

Art Unit: 1742

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 1 to 6, drawn to a forged part having a base phase structure containing 30% or more ferrite and a second phase structure comprising retained austenite, as well as bainite and/or martensite, classified in class 420, subclass 320.

Page 2

- II. Claim 7, drawn to method of making forged part by heating and holding steel at (Ae1-30C) to Ae3 for 10 seconds or more, forging, cooling to 325 to 475C a a cooling rate of 3C/s or more, and holding in said temperature range for 60 to 3600 seconds, classified in class 148, subclass 649.
- III. Claims 8 to 13, drawn to a forged part having a base phase structure containing 50% or more tempered bainite or tempered martensite and a second phase structure comprising retained austenite and martensite, classified in class 148, subclass 320.
- IV. Claim 14, drawn to method for producing forged part by heating and holding at (Ae1-30C) to (Ae3-30C) for 10 seconds or more, forging, cooling to 325 to 475C at a cooling rate of 3C/s or more and holding in said temperature range for 60 to 3600 seconds, classified in class 148, subclass 649.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions of group II and IV and groups I and III are related as process of making and product made. The inventions are distinct if either or both of the following

Application/Control Number: 10/785,080

Art Unit: 1742

can be shown: (1) that the process as claimed can be used to make another and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product can be made by two separate heat treatment steps comprising a forging treatment and subsequent refining treatment involving quenching and tempering carried out separately.

Page 3

- 3. Inventions of groups I and II and groups III and IV are directed to related inventions. The related inventions are distinct if the inventions as claimed do not overlap in scope, i.e., are mutually exclusive; the inventions as claimed are not obvious variants; and the inventions as claimed are either not capable of use together or can have a materially different design, mode of operation, function, or effect. See MPEP § 806.05(j). In the instant case, groups I and II are directed to a forged part having a base phase structure containing 30% or more ferrite with a second phase structure comprising retained austenite, as well as bainite and/or martensite which is a materially different design from groups III and IV which are directed to a forged part having a base phase structure containing 50% or more tempered bainite or tempered martensite and a second phase structure containing retained austenite and martensite.
- 4. Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Application/Control Number: 10/785,080

Art Unit: 1742

5. A telephone call was made to Mr. Corwin Umbach on July 13, 2006 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Deborah Yee whose telephone number is 571-27211253. The examiner can normally be reached on monday-friday 6:00am-2:30pm.

Application/Control Number: 10/785,080 Page 5

Art Unit: 1742

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Roy King can be reached on 571-272-1244. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
